

## IDA\_NEMO\_NOR\_14: Perform MP check on IDA results

<b>Version</b>	1.0	
<b>Date</b>	23/05/2024	
<b>Status</b>	<input type="checkbox"/> Draft	<input checked="" type="checkbox"/> Final

### Previous versions

Version	Date	Author	Summary of changes
1.0	23/05/2024	██████	Version for IDA GL

### Remarks

As a general principle, as soon as an event occurs that prevents the normal performance of a process, the operators refer to [IDA\\_NEMO\\_BUP\\_14](#).

# 1. Introduction

## MCSC daily timeline

## Procedural structure

This procedure describes the process of the Market Coupling Results verification by the Market participants, which outcome is reflected in the Final Confirmation. It must be stated that rejection of the results from the market participants is the only possible cause for a NEMO to send a Negative Final Confirmation.

Once the Market Coupling Results are confirmed by the market participants, the Final Confirmation is forwarded by the related NEMO to the [REDACTED] to generate and distribute the Global Final Confirmation (positive or negative) to all NEMOs. Subsequently, IDA coordinator and each NEMO sends them to the [REDACTED], where the mentioned module is going to perform the corresponding actions.

### 1.1. Summary

This procedure starts once the positive Global Preliminary Confirmation of the Market Coupling Results has been sent by the [REDACTED] to the NEMOs.

Each NEMO is free to choose between the following two options for publishing the Market Coupling Results:

- Publication after the reception of the Global Preliminary confirmation, normally at [REDACTED] with a note/disclaimer that these are Preliminary Results.
- Publication after the reception of the Global Final Confirmation, where required, when the Market Coupling Results are considered as firm for all NEMOs (normally at [REDACTED]).

NEMOs have [REDACTED] to validate with their Market Participants the preliminary results and send the Final Confirmation to the [REDACTED] which has to process it and send the Global Final Confirmation back to NEMOs. Before these [REDACTED], the Global Final Confirmation has to be sent to the [REDACTED].

In parallel with the previous market participants' validation, [REDACTED] and/or local NEMO systems are performing the verification of the Market Coupling Results before sending their Final Confirmation.

## 1.2. Governed / Regulated by

- IntraDay Operations Agreement (IDOA)
- SIDC High Level Architecture (HLA)

## 1.3. Tools and Communication protocols

[REDACTED]

## 1.4. Associated procedures

### In normal situation:

Preceding procedures:

- IDA\_NEMO\_NOR\_12: Preliminary Confirmation of the Results

Parallel procedures:

- IDA\_JOINT\_NOR\_15: Send IDA results from [REDACTED] to [REDACTED]

Subsequent procedures:

- IDA\_NEMO\_NOR\_17: Final Confirmation from NEMO to [REDACTED] and Global Final Confirmation to [REDACTED]

**In back-up situation:** as soon as an event happens that prevents the normal performance of the IDA\_NEMO\_NOR\_14 process, the operators refer to IDA\_NEMO\_BUP\_14.

## 2. Procedure

### 2.1. Preconditions to start

The precondition to start this process is the successful completion of the previous step described in the procedure *IDA\_NEMO\_NOR\_06-Preliminary Confirmation of the Results* during which all the NEMOs have received the positive Global Preliminary Confirmation from the [REDACTED].

### 2.2. Process Clarification

After receiving the Global Preliminary Confirmation, all NEMOs are allowed to publish the IDA results to the market participants. These results are preliminary. It must be indicated to the market participants.

During [REDACTED]<sup>1</sup>, the market participants can do an internal check of the results. The market participants can claim that their submitted orders have not been accepted or rejected following the market rules.

When any market participant considers that some of their orders have been incorrectly accepted or rejected, they may claim to their operational NEMO. The operational NEMO may accept or reject this claim following the market rules framework before sending the Final Confirmation to the [REDACTED].

Once the dedicated time for the market participants to validate the results has passed, no claim must be accepted by the NEMOs.

*Table 1 – Risk Cases associated to the process*

#	Risk cases	Measures taken
1	Market participants reject the results.	IDA_NEMO_BUP_14

## 2.4 Final state

The procedure ends when the dedicated time for the market participants to validate the results has passed and no valid rejection of the results has been received from the market participants.

---

<sup>1</sup> This is aligned with the same deadline as for [REDACTED] validation
