1. SIDC Intraday Auctions

Single Intraday Coupling (SIDC) operates a single EU-wide cross-zonal intraday electricity market, complemented by three Intraday Auctions (IDAs) that enhance efficiency and provide accurate price signals for scarce cross-border capacity. The map below shows the European countries participating in IDAs.

For more information, please visit the ENTSO-E and NEMO Committee websites.

1.1 Normal Process and Timings

Intraday Auctions occur several times per day, each with a predefined Order Book Gate Closure Time (OBK GCT). Twenty minutes before this closure, cross-zonal capacity allocation through

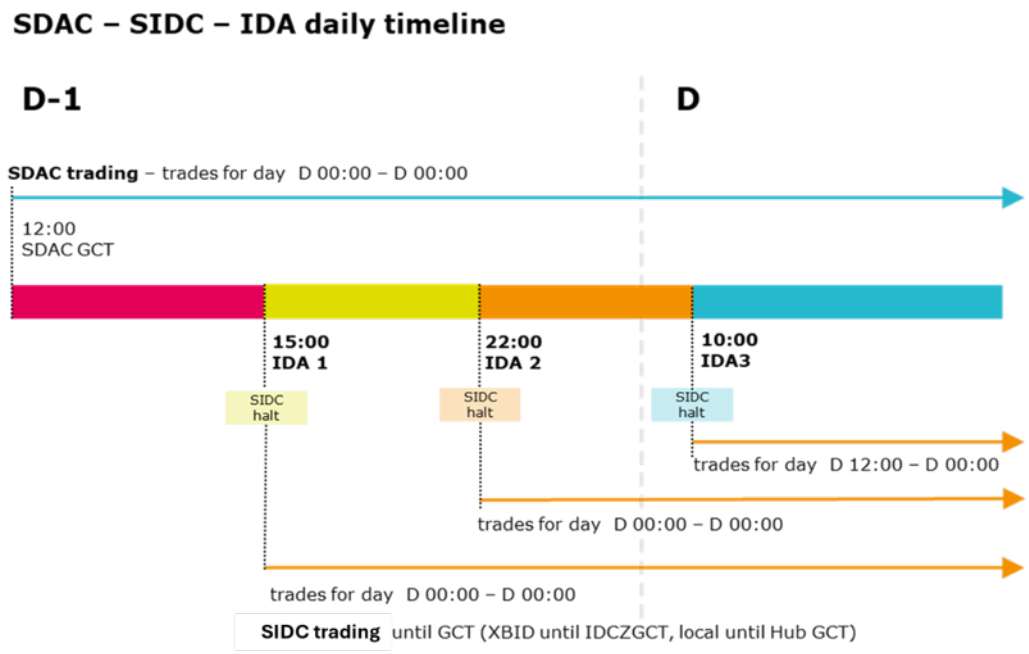

Intraday Continuous Trading (IDCT) is suspended. This pause allows TSOs to update capacities based on the latest calculations and provide the necessary Cross-Zonal Capacities and Allocation Constraints for the auction.

At OBK GCT, NEMOs exchange these capacities and constraints across their systems and begin transferring Order Books to the central NEMO systems operating the Intraday Auction. Once all Order Books are received, the coupling process starts, taking into account the provided capacities and constraints.

After the auction results are generated, NEMOs validate them and make them available to TSOs via the SIDC Capacity Management Module for verification and allocation of Cross-Zonal Capacity on relevant bidding zone borders.

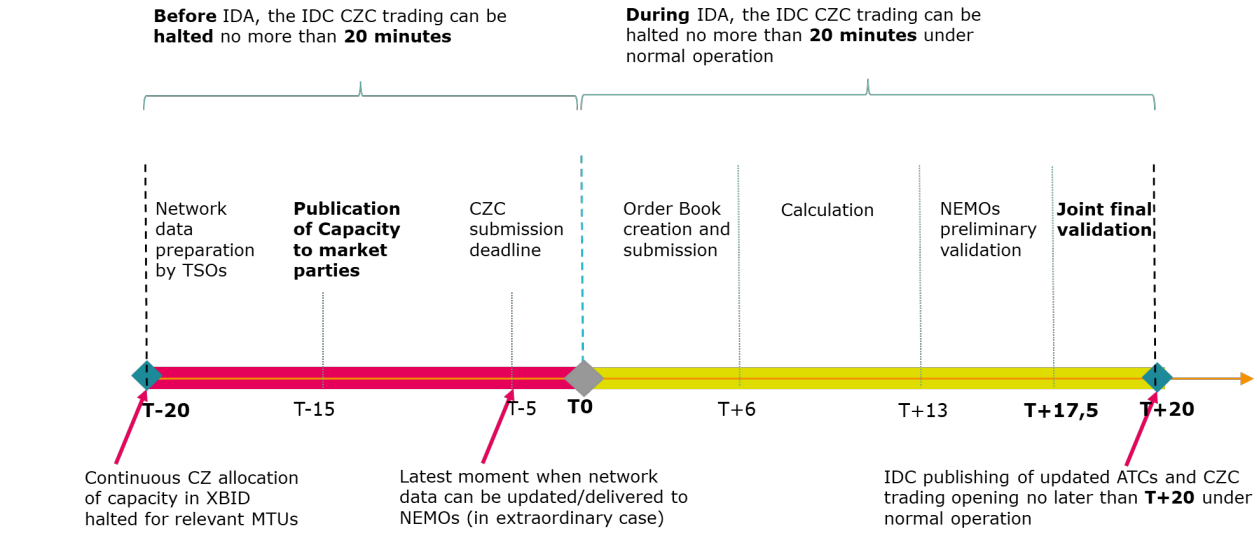

Once this window closes, cross-border continuous trading automatically reopens, and any possible incomplete Intraday Auction process is automatically cancelled. This report explores the circumstances and implications of such cancellations.

MCSC Daily Timeline

SIDC/IDA Timeline – Coupling Timing 15:00 / 22:00 / 10:00 CE(S)T

IDA timeline

IDA 1	**14:40**	**14:45**	**15:00**	**15:20**
IDA 2	**21:40**	**21:45**	**22:00**	**22:20**
IDA 3	**09:40**	**09:45**	**10:00**	**10:20**

1.2 Incident Management Process

An incident is defined as an unwanted event occurring within the SIDC IDA systems, the local NEMO or TSO systems connected to SIDC IDA, or the communication channels linking them. An incident that requires convening an Incident Committee (IC) call has the following characteristics: the issue(s) cannot be resolved through a (Local) Backup procedure and may result in breaching a SIDC deadline.

Operational parties have agreed to follow the incident management procedure for handling such incidents. This procedure assumes that communication with relevant third parties (e.g., CCP, Shipping Agent, Explicit Participants) is managed by the involved TSOs and NEMOs according to their local processes.

As a general principle, the Incident Management procedure defines how incidents are addressed. This includes the operation of the Incident Committee (IC) and the application of measures such as closing and reopening interconnectors, restarting markets or delivery areas, suspending trading services, executing corresponding local procedures, and exchanging files in backup mode.

When an incident impacts any Single Intraday Market Coupling process, an Incident Committee (IC) must be convened by the IC SPOC or the IDA Coordinator. Participants in the IC identify the issue(s), assess the situation, and agree on potential solutions. The IC SPOC or IDA

Coordinator records all relevant information, including incident details, discussions, and decisions made during the IC call.

At the start of the IC call, the IC SPOC, the incident reporter, or the IDA Coordinator presents the issue. The parties review actions already taken by the affected party and agree on immediate measures. They also ensure correct classification of the incident, particularly for XBID-related cases.

The IC discusses potential solutions, including recommendations from the service provider where necessary. Once a solution is agreed upon, the parties decide on its implementation. The IC also determines the appropriate communication to market participants.

Typically within two hours after the IC call concludes, the IC SPOC or IDA Coordinator prepares and finalizes the IC report and shares it with all NEMOs and TSOs. The involved parties review and update the report as needed. For IDCT issues affecting IDAs, the IC SPOC prepares the report; for IDA issues affecting IDCT, the IDA Coordinator is responsible.

2. Incident Description

This report informs stakeholders of an incident affecting the Intraday Auction 1 on 07/10/2026, resulting in the cancellation of this IDA. The incident occurred due to a Negative Preliminary Confirmation sent by a NEMO due to an issue on their Portfolio Allocation process. The issue was resolved after the IDA1 Cancellation. A temporary fix of the Portfolio Allocation Process has been implemented in the Local Trading System on 7/10/2026 to prevent similar issues during future IDA sessions and permanent Portfolio Allocation Process correction was implemented on 9/10/2026.

2.1 Course of Events

2.2 Timeline

Event	Start	End
Incident occurrence.	07/10/2026; 15:11	07/10/2026; 15:27
Triggering of Incident Committee.	07/10/2026; 15:12	07/10/2026; 15:29
NEMO sends a Negative Preliminary Confirmation.	07/10/2026; 15:11	
IDA Coordinator asks the concrete NEMO whether the Negative Preliminary Confirmation will be reverted into a positive one.	07/10/2026; 15:12	
The NEMO informs about a Portfolio Allocation issue on their side.	07/10/2026; 15:12	

The NEMO does not solve the issue, so the IDA Coordinator declares the IDA as canceled.	07/10/2026; 15:27	

2.3 Incident Cause

The incident was caused by a portfolio allocation issue in the market area CZ. Discrepancy in traded volumes resulted in a paradoxically rejected order. This discrepancy led to an impossibility to accept the IDA results. So, a Negative Preliminary Confirmation was sent from the NEMO side. Following procedures, IDA cancellation was declared.

2.4 Impacted NEMOs, Bidding Zones and Bidding Zone Borders

Impacted NEMOs:

All NEMOs.

Impacted Bidding Zones:

All Bidding Zones.

Impacted Bidding Zone Borders:

All Bidding Zones Borders.

3. Mitigation Measures And Lessons Learnt

To ensure the successful restoration of the operations and prevent the issue from happening again, the following measures have been taken:

Short-Term Solution by Affected Party	A temporary fix of the Portfolio Allocation Process has been implemented in the relevant NEMO's Local Trading System on 7/10/2026 to prevent similar issues during future IDA sessions. In parallel, testing of a permanent solution was underway. These measures are intended to further strengthen operational reliability and reduce the likelihood of recurrence.
Long-Term Measures by Affected Party	A permanent Portfolio Allocation Process correction **was implemented** in the relevant NEMO's Local Trading System to prevent similar processing inconsistencies during future IDA sessions **on 9/10/2026**. These measures are intended to further strengthen operational reliability and reduce the likelihood of recurrence.
