1. Introduction

When the Market Coupling session ends, the IDA Coordinator has to send by email to all IDA Operators the IDA Report. Apart from that, all operating parties shall provide the Algorithm Working Group with the [REDACTED] Session Dump. In case there are problems in generating the report and sending it, the following backup procedure applies.

1.1. Summary

The purpose of this procedure is to describe the applicable backup solutions in case of an issue during daily report generation or the sending of it.

1.2. Governed / Regulated by

- IntraDay Operations Agreement (IDOA)
- SIDC High Level Architecture (HLA)

1.3. Tools and Communication protocols

[REDACTED]

1.4. Associated procedures

- IDA_NEMO_NOR_24: IDA Report and Euphemia Session Dump

2. IDA report

2.1. General overview

This backup procedure will be executed by the IDA Coordinator at the end of the IDA session in case of issue with the IDA Report.

Cases	Description: IDA report	Target Time
1	Problem in creating the IDA Report	ASAP
2	Problem in sending all the IDA Reports	ASAP

2.2. Process clarification

Case 1: Problem in creating the IDA Report

If the IDA Coordinator is not able to create the IDA Report, the IDA Coordinator sends an email to inform the other IDA NEMO Operators that he is not able to generate the IDA Report and that it will be generated as soon as possible.

If the file creation functionality is not available, the IDA Coordinator will directly contact the [REDACTED] as described in procedure IDA_NEMO_EXC_04 to identify and solve the problem.

Case 2: Problem in sending all the IDA Reports

If IDA Coordinator has created all the IDA Reports for the current delivery day but he is not able to send them by email, the reports can be sent the day after.

2.3. Operational Manual Reference

See chapter 'Daily Operational Report' in the Operational Manual (User Guide provided by [REDACTED]).

3. [REDACTED] Session Dump

3.1 General Overview

Case	Description: [REDACTED] Session Dump	Target Time
1	No [REDACTED] Session Dump can be generated.	ASAP
2	[REDACTED] Session Dump cannot be compressed and encrypted.	ASAP
3	[REDACTED] Session Dump cannot be transferred to the [REDACTED].	ASAP
4	Problem with the transfer of [REDACTED] Session Dump to the Simulation Facility	ASAP

3.2. Process clarification

Case 1: No [REDACTED] Session Dump can be generated.

If the IDA Operator cannot create [REDACTED] Session Dump, he will need to follow local procedures at each IDA Operator, verifying configuration of the Algorithm Dump Collection Tool.

Case 2: [REDACTED] Session Dump cannot be compressed and encrypted.

If the IDA Operator cannot compress and encrypt [REDACTED] Session Dump the IDA Operator should contact their local IT department and ensure that the problem is fixed in order to provide the [REDACTED] Session Dump as soon as possible.

Case 3: [REDACTED] Session Dump cannot be transferred to the [REDACTED].

If the IDA Operator cannot transfer [REDACTED] Session Dump to the [REDACTED] because the [REDACTED] is unavailable, the zipped and encrypted file has to be sent by email to [REDACTED].

Case 4: Problem with the transfer of [REDACTED] Session Dump to the Simulation Facility

If the IDA Operator is unable to upload the dump file to the Simulation Facility [REDACTED] due to its unavailability, the IDA Operator must notify [REDACTED] via email. Do not attach or send the dump file in the email. Wait for confirmation from [REDACTED] that the issue has been resolved and the [REDACTED] is operational again. Once confirmed, the IDA Operator should proceed with uploading the file.
