

28th September 2022, Brussels

All NEMOs in co-operation with ENTSO-E will organise a seminar in Brussels to provide market participants and stakeholders information on the published „CACM Annual Report 2021“ with details on intraday and day-ahead coupling. The seminar will also address the first months of operation of the Core Flow-based Market Coupling.

The fourth CACM Annual Report, prepared by the Nominated Electricity Market Operators (NEMOs) in co-operation with Transmission System Operators (TSOs), monitors the implementation of the Capacity Allocation and Congestion Management Regulation (CACM Regulation) and the associated Algorithm methodology. The report provides a comprehensive overview of the single day-ahead coupling (SDAC) and single intraday coupling (SIDC) operations in 2021 and gives a broad outline of the current and future performance of market coupling algorithms and the R&D activities undertaken.

The seminar will focus on the 2021 data of the market couplings and the first 100 days of operation of the Core Flow-based Market Coupling. In addition, a policy session with guest speakers will be held focusing on the upcoming changes and challenges for 2023.

The detailed agenda will be published soon.
