1. Introduction

This procedure describes the process of the Final Results Confirmation: after receiving the Global Preliminary Confirmation file and the publishing time contained in that file has been reached (the trigger to start this process),

After all Operational NEMOs have sent a positive Final Confirmations, the PMB Coordinator sends the Global Final Confirmation of the Results, action which ends the global MC process.

1.1. Summary

The purpose of this procedure is to describe the part of the market coupling process that starts when the Global Preliminary Confirmation of the results is distributed by the PMB Coordinator to every PMB Operator.

The precondition to start this process is the successful completion of procedure *ANDOA_NOR_06 in* which all the PMB Operator have received the Global Preliminary Confirmation message from the PMB Coordinator.

- A) Final Confirmation can be sent after the publishing time in Global Preliminary Confirmation has been reached, when the results file has been shared with external parties (TSO/Members).
- B) Final Confirmation can be sent before the publishing time has been reached, when no validation has been applied and only when a **positive** Final Confirmation will be given.

Remark: If a negative Final Confirmation is received in the PMB and the publication time has not been reached yet, PMB Operator will try to reach consensus during the IC concerning a recommended coordinated publication time.

The procedure ends with the Global Final Confirmation message is received by every PMB. The steps are the following:

- Each Operational NEMO has the possibility to validate with external parties (TSO, market participants, etc.) the results received from the PMB Coordinator.
- Each PMB Operator has to send to the Cloud an answer (positive or negative) for the Final Results Confirmation.

Once the PMB Coordinator has received all the Final Results Confirmations from all PMBs, the PMB Coordinator sends out to all PMBs the Global Final Confirmation message and the procedure ends.

This procedure will describe the kind of checks that can be performed by each Operational NEMOs with its external parties during this final validation of the results and which can be the reasons for rejecting the final results. Furthermore, some timing requirements will be set for this process.

1.2. Governed / Regulated by

All NEMO Day Ahead Operational Agreement

1.3. Associated Procedures

- **In normal situation:**
 - ANDOA_NOR_06: Preliminary Confirmation of the Results. The previous process must have been successfully completed.
 - ANDOA_NOR_08: Daily Report. When ANDOA_07 has passed successfully, the market coupling session ends successfully.
- **In backup situation:** as soon as an event happens that prevents the normal performance of the ANDOA_NOR_07 process step, the PMB operators refer to ANDOA_BUP_07.

2. Procedure

2.1. Preconditions to start

The precondition to start this process is the successful completion of procedure *ANDOA_NOR_06: Preliminary Confirmation of the Results* in which all the PMB Operators have received the Global Preliminary Confirmation message from the PMB Coordinator and the publishing time mentioned in that message has been reached.
